

Food2Go

Fan heating + Compressor cooling

Product description

Food2Go is a mobile serving platform designed to hold and transport both hot and cold food. The box is built with ScanBox's ExP construction, combining optimized insulation performance with high operational reliability and environmentally conscious design choices.

As standard, Food2Go is equipped with two individual heating zones on top and a service surface. Below, there are two separate compartments: one with fan-assisted heating for even heat distribution, capable of reaching operating temperatures up to 90°C, and one with compressor

cooling that chills down to 3°C. Adjustable temperature and ventilation settings ensure precise control of food quality. The compartments have a capacity for 7 hot and 7 cold GN 1/1 containers.

Standard features include a central brake, single-grip handles, and removable U-shaped racks with 80 mm spacing for easy cleaning. The equipment can be customized with additional options such as heating lamps, tray slides, and other accessories to streamline the serving process. Contact us for more information.
